DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claim 8 recites the limitation "the narrowing" in claim 7. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alvarez (US 4170993 A) in view of Wozencroft (WO 9301851 A1.

Art Unit: 3763

Alvarez discloses A butterfly needle (10) comprising a substantially cylindrical body (14) with two outwardly extending flexible tongues (40), and a needle (18) mounted axially in the head of a needle-carrier (16) coupled to the body (14) so that the needle (16) protrudes forward from the body the needle-carrier having a tail (22) protruding rearward from the, wherein the needle-carrier device (10) is mounted so as to slide axially inside the body to pass from a forward position of use wherein the needle (16) protrudes forward from the body (14) to perform the injection to a retracted position of safety in which the needle (16) is protected inside the body (14), there being provided guide means (30) and end-of-stroke and locking means (34, 32) able to lock the needlecarrier in the forward position and in the retracted position; and wherein the guide means (30) comprises a longitudinal slot formed in the body (14) and a substantially cylindrical nib (26) which protrudes radially outward the needle-carrier (16) and wherein the longitudinal slot is defined by a front abutment surface and a rear abutment surface (see fig. 2), and an operating lever (24) operated manually the lever received in the recess (see fig. 2).

Alvarez fails to disclose that the tongues are bent, a front spring and a flexible tongue in the longitudinal slot.

Wozencroft et al discloses tongues that can be manually grasped and bent by the user from a diverging position to a converging position (4,5) and a front spring (10) as well as a flexible tongue (20, 25) disposed obliquely in the rear part of the

Art Unit: 3763

longitudinal slot wherein the at least one flexible longitudinal tongue (20, 25) is formed by means of a longitudinal cut, (see fig. 1 and page 5 line 15).

It would have been obvious to one having ordinary skill in the art at the time of invention by applicant to modify the device of Alvarez by incorporating the flexible tongues and spring of the type taught by Wozencroft et al in order allow easier removal of the needle device.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-10 provisionally rejected on the ground of nonstatutory obviousnesstype double patenting as being unpatentable over claims 1-14 of copending Application

Art Unit: 3763

No. 2005/0177112 A1. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one having ordinary skill in the art at the time of invention by applicant to modify the device of the co-pending application by adding the locking elements of the instant application.

Page 5

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aamer S. Ahmed whose telephone number is 571-272-5965. The examiner can normally be reached on Monday thru Friday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
